

18—19—2 练习题 A 答案

一、判断题（每小题 2 分，共 10 分）

题号	1	2	3	4	5
对错	×	√	×	×	√

二、填空题（每空 3 分，共 15 分）

1. 0 2. 0 3. 0 4. -8 5. 0

三、选择题（每小题 3 分，共 15 分）

1. D 2. C 3. A 4. D 5. B

四、计算题（每小题 10 分，共 50 分）

1. 解：

$$\begin{aligned}
 D &= \begin{vmatrix} 1+a & 1 & 1 & 1 \\ 1 & 1-a & 1 & 1 \\ 1 & 1 & 1+b & 1 \\ 1 & 1 & 1 & 1-b \end{vmatrix} = \begin{vmatrix} a & 1 & 0 & 1 \\ a & 1-a & 0 & 1 \\ 0 & 1 & b & 1 \\ 0 & 1 & b & 1-b \end{vmatrix} = ab \begin{vmatrix} 1 & 1 & 0 & 1 \\ 1 & 1-a & 0 & 1 \\ 0 & 1 & 1 & 1 \\ 0 & 1 & 1 & 1-b \end{vmatrix} \\
 &= ab \begin{vmatrix} 1 & 1 & 0 & 1 \\ 0 & -a & 0 & 0 \\ 0 & 1 & 1 & 1 \\ 0 & 1 & 1 & 1-b \end{vmatrix} = ab \begin{vmatrix} -a & 0 & 0 \\ 1 & 1 & 1 \\ 1 & 1 & 1-b \end{vmatrix} = -a^2 b \begin{vmatrix} 1 & 1 \\ 1 & 1-b \end{vmatrix} = a^2 b^2
 \end{aligned}$$

2. 解：

$$\begin{aligned}
 &\begin{vmatrix} 2 & 2 & 0 & 0 \\ 2 & 2 & 0 & 0 \\ 2 & 2 & 0 & 0 \\ 2 & 2 & 0 & 0 \end{vmatrix} = 0 \\
 &\begin{vmatrix} 1 & 1 & 1 & 1 \\ 1 & 1 & 1 & 1 \\ 1 & 1 & 1 & 1 \\ 1 & 1 & 1 & 1 \end{vmatrix} = 0 \\
 &\begin{vmatrix} 1 & 1 & 1 & 1 \\ 1 & 1 & 1 & 1 \\ 1 & 1 & 1 & 1 \\ 1 & 1 & 1 & 1 \end{vmatrix} = 0 \\
 &\begin{vmatrix} 1 & 1 & 1 & 1 \\ 1 & 1 & 1 & 1 \\ 1 & 1 & 1 & 1 \\ 1 & 1 & 1 & 1 \end{vmatrix} = 0
 \end{aligned}$$

$$\begin{array}{cccccc} \begin{array}{c} \textcircled{1} \\ \textcircled{2} \\ \textcircled{3} \\ \textcircled{4} \end{array} & \begin{array}{c} 1 \\ -2 \\ 0 \\ 0 \end{array} & \begin{array}{c} 1 \\ 0 \\ -2 \\ -2 \end{array} & \begin{array}{c} \frac{1}{2} \\ -\frac{1}{2} \\ -\frac{1}{2} \\ \frac{1}{2} \end{array} & \begin{array}{c} 0 \\ 0 \\ \frac{1}{2} \\ 0 \end{array} & \begin{array}{c} 0 \\ \frac{1}{2} \\ 0 \\ 0 \end{array} \\ \begin{array}{c} \textcircled{1} \\ \textcircled{2} \\ \textcircled{3} \\ \textcircled{4} \end{array} & \begin{array}{c} 1 \\ 1 \\ 0 \\ 0 \end{array} & \begin{array}{c} 1 \\ 0 \\ 1 \\ 1 \end{array} & \begin{array}{c} \frac{1}{2} \\ \frac{1}{4} \\ \frac{1}{4} \\ -\frac{1}{4} \end{array} & \begin{array}{c} 0 \\ 0 \\ 0 \\ 0 \end{array} & \begin{array}{c} 0 \\ -\frac{1}{4} \\ 0 \\ 0 \end{array} \end{array} \quad \begin{array}{c} \textcircled{1} \\ \textcircled{2} \\ \textcircled{3} \\ \textcircled{4} \end{array} \begin{array}{c} 0 \\ 1 \\ 0 \\ 0 \end{array} \begin{array}{c} 0 \\ \frac{1}{4} \\ \frac{1}{4} \\ -\frac{1}{4} \end{array} \begin{array}{c} \frac{1}{4} \\ 0 \\ 0 \\ -\frac{1}{4} \end{array} \begin{array}{c} \frac{1}{4} \\ -\frac{1}{4} \\ 0 \\ 0 \end{array}$$

$$\text{即 } A^{-1} = \frac{1}{4} \begin{pmatrix} 0 & 1 & 1 \\ 1 & 0 & -1 \\ 1 & -1 & 0 \end{pmatrix}$$

$$3. \text{ 解: } \begin{array}{cccc} \begin{array}{c} \textcircled{1} \\ \textcircled{2} \\ \textcircled{3} \\ \textcircled{4} \end{array} & \begin{array}{c} 1 \\ 1 \\ 0 \\ 0 \end{array} & \begin{array}{c} 1 \\ 0 \\ 0 \\ 0 \end{array} & \begin{array}{c} 1 \\ 2 \\ -3 \\ -3 \end{array} \end{array} \quad \begin{array}{c} b_1 \\ b_2 \\ b_3 \\ b_4 \end{array} \begin{array}{c} 0 \\ 1 \\ 0 \\ 0 \end{array} \begin{array}{c} 1 \\ -1 \\ 5 \\ -3 \end{array}$$

易知 b_1, b_2, b_3 是向量组 b_1, b_2, b_3, b_4 的极大线性无关组且 $b_4 = -3b_1 + 5b_2 - b_3$. 故 a_1, a_2, a_3 是向量组 a_1, a_2, a_3, a_4 的极大线性无关组且 $a_4 = -3a_1 + 5a_2 - a_3$.

$$4. \text{ 解: } \begin{array}{cccccc} \begin{array}{c} \textcircled{1} \\ \textcircled{2} \\ \textcircled{3} \\ \textcircled{4} \end{array} & \begin{array}{c} 1 \\ 3 \\ 0 \\ 0 \end{array} & \begin{array}{c} 1 \\ 2 \\ 1 \\ 2 \end{array} & \begin{array}{c} 1 \\ 1 \\ 2 \\ 6 \end{array} & \begin{array}{c} 1 \\ -3 \\ 23 \\ 23 \end{array} & \begin{array}{c} 7 \\ -2 \\ 0 \\ 0 \end{array} \end{array} \quad \begin{array}{c} \textcircled{1} \\ \textcircled{2} \\ \textcircled{3} \\ \textcircled{4} \end{array} \begin{array}{c} 1 \\ -2 \\ 0 \\ 0 \end{array} \begin{array}{c} 1 \\ -1 \\ 0 \\ 0 \end{array} \begin{array}{c} 1 \\ -2 \\ 0 \\ 0 \end{array} \begin{array}{c} 1 \\ -6 \\ 0 \\ 0 \end{array} \begin{array}{c} 7 \\ -23 \\ 0 \\ 0 \end{array}$$

故原方程组同解于 $\begin{cases} x_1 + x_2 + x_3 + x_4 + x_5 = 7 \\ 2x_2 + x_3 + 2x_4 + x_5 = 23 \end{cases}$. 取 x_3, x_4, x_5 为自由变量, 可得

$$\text{即 } \begin{cases} x_1 + x_2 = 7 - x_3 - x_4 - x_5 \\ 2x_2 = 23 - x_3 - 2x_4 - x_5 \end{cases}$$

取 $(x_3, x_4, x_5) = (0, 0, 0)$ 可得非齐次线性方程组的特解为 $h = (-\frac{9}{2}, \frac{23}{2}, 0, 0, 0)^T$.

原方程对应的齐次方程组同解于

$$\begin{cases} x_1 + x_2 = -x_3 - x_4 - x_5 \\ 2x_2 = -x_3 - 2x_4 - x_5 \end{cases}$$

分别取 $(x_3, x_4, x_5) = (1, 0, 0), (0, 1, 0), (0, 0, 1)$. 可得

$$\begin{aligned} x_1^T &= (-\frac{1}{2}, -\frac{1}{2}, 1, 0, 0) \\ x_2^T &= (0, -1, 0, 1, 0) \\ x_3^T &= (2, -3, 0, 0, 1) \end{aligned} \quad , \text{ 故原方程组通解为 } X = k_1 x_1 + k_2 x_2 + k_3 x_3 + h .$$

$$5. \text{ 解: } f(x_1, x_2, x_3) = (x_1, x_2, x_3) \begin{pmatrix} 1 & -2 & 2 \\ 2 & 4 & -4 \\ 2 & -4 & 4 \end{pmatrix} (x_1, x_2, x_3)^T = X^T A X .$$

$$|E - A| = \begin{vmatrix} 1-1 & 2 & -2 \\ 2 & 1-4 & 4 \\ -2 & 4 & 1-4 \end{vmatrix} = \begin{vmatrix} 1-1 & 2 & -2 \\ 0 & 1 & 1 \\ -2 & 4 & 1-4 \end{vmatrix} = \begin{vmatrix} 1-1 & 4 \\ -2 & 8-1 \end{vmatrix} = 1 \cdot 9 - 1 = 0$$

$$\text{当 } \lambda = 0 \text{ 时, 解 } (0E - A)X = 0 \text{ 即 } \begin{pmatrix} -1 & 2 & -2 \\ 2 & -4 & 4 \\ 2 & -4 & -4 \end{pmatrix} \begin{pmatrix} x_1 \\ x_2 \\ x_3 \end{pmatrix} = 0 \text{ 可得基础解系为}$$

$$a_1 = (2, 1, 0)^T, a_2 = (-2, 0, 1)^T$$

$$\text{当 } \lambda = 9 \text{ 时, 解 } (9E - A)X = 0 \text{ 即 } \begin{pmatrix} 8 & 2 & -2 \\ 2 & 5 & 4 \\ 2 & 4 & 5 \end{pmatrix} \begin{pmatrix} x_1 \\ x_2 \\ x_3 \end{pmatrix} = 0 \text{ 可得基础解系为}$$

$$a_3 = (\frac{1}{2}, -1, 1)^T$$

将 a_1, a_2 正交化, 令

$$b_1 = a_1 = (2, 1, 0)^T, b_2 = a_2 - \frac{(a_2, b_1)}{(b_1, b_1)} b_1 = (-\frac{2}{5}, \frac{4}{5}, 1)^T$$

将 b_1, b_2, a_3 单位化, 有

$$g_1 = (\frac{2}{\sqrt{5}}, \frac{1}{\sqrt{5}}, 0)^T, g_2 = (-\frac{2\sqrt{5}}{15}, \frac{4\sqrt{5}}{15}, \frac{5\sqrt{5}}{15})^T, g_3 = (\frac{1}{3}, -\frac{2}{3}, \frac{2}{3})^T, \text{ 从而得正交矩阵}$$

$$Q = (q_1, q_2, q_3) = \begin{pmatrix} \frac{2\sqrt{5}}{5} & -\frac{2\sqrt{5}}{15} & \frac{1}{3} \\ \frac{\sqrt{5}}{5} & \frac{4\sqrt{5}}{15} & -\frac{2}{3} \\ 0 & \frac{5\sqrt{5}}{15} & \frac{2}{3} \end{pmatrix}, \text{ 因此二次型经正交变换}$$

$$\begin{pmatrix} x_1 \\ x_2 \\ x_3 \end{pmatrix} = \begin{pmatrix} \frac{2\sqrt{5}}{5} & -\frac{2\sqrt{5}}{15} & \frac{1}{3} \\ \frac{\sqrt{5}}{5} & \frac{4\sqrt{5}}{15} & -\frac{2}{3} \\ 0 & \frac{5\sqrt{5}}{15} & \frac{2}{3} \end{pmatrix} \begin{pmatrix} y_1 \\ y_2 \\ y_3 \end{pmatrix} \text{ 化为 } f = 0y_1^2 + 0y_2^2 + 9y_3^2 = 9y_3^2$$

五、证明题（10分）

证：因为 $a_1, a_2, \dots, a_s$ 线性相关，则存在不全为 0 的实数 $k_1, k_2, \dots, k_s, l$ 使得 $k_1 a_1 + k_2 a_2 + \dots + k_s a_s + l b = 0$ 。

假设 $l = 0$ ，则存在不全为 0 的实数 $k_1, k_2, \dots, k_s$ ，使得 $k_1 a_1 + k_2 a_2 + \dots + k_s a_s = 0$ ，与 $a_1, a_2, \dots, a_s$ 线性无关矛盾。

$$\text{故 } l \neq 0, \text{ 则有 } b = -\frac{k_1}{l} a_1 - \frac{k_2}{l} a_2 - \dots - \frac{k_s}{l} a_s,$$

即 b 可由向量组 $a_1, a_2, \dots, a_s$ 线性表示。

假设 $b = m_1 a_1 + m_2 a_2 + \dots + m_s a_s$ ，且 $b = n_1 a_1 + n_2 a_2 + \dots + n_s a_s$ ，则有

$(m_1 - n_1) a_1 + (m_2 - n_2) a_2 + \dots + (m_s - n_s) a_s = 0$ ，又因为 $a_1, a_2, \dots, a_s$ 线性无关，故 $m_i = n_i$ ，即表达式唯一。
